Welcome message

Welcome...!!!

The field of clinical and translational cardiology continues to evolve at a rapid pace. For example, this progress is clearly visible in cardiovascular imaging. It is almost impossible to imagine clinical cardiology without ultrasound, MR, CT, IVUS, or most recently OCT imaging tools. Using image data, the current frontier is its reliable quantification that facilitates routine patient management based on the principles of personalized/precision medicine. Perhaps the most recent trend that is beginning to appear in computational cardiology research is the use of artificial intelligence and machine learning for outcome prediction and treatment optimization. Undoubtedly, the 3rd International Congress on Heart and Cardiology will allow its participants to gain new knowledge and learn about new trends in clinical management as well as to discuss the latest accomplishments of cardiology research.

Yours Sincerely
